DEDICATION

This research work is dedicated to, my family, friends and well-wishers who in one way or the other supported me and making this project work possible.

ACKNOWLEDGEMENTS

All Glory be to God Almighty for his love and mercy upon my life and for the success of the project research.

I immensely thank my project supervisor, Dr. Mrs. Ifeyinwa Okonkwo for her time, patience, helpful information, practical advice and unceasing ideas that really helped me tremendously through this project research. Without her support and guidance this project would not have been possible.

My inestimable thanks also goes to the H.O.D Dr. Mrs Amaka Nwofor, Dr E.E Aghuache for her motherly love , Prof A.U Echedom, Dr K. O. Udem, A.R Obiamalu, Dr C. Ezeabasili , Mrs A . Obuezie, Dr. N. Osuchukwu and the entire non Academic staff of Library and Information Science Department for their continuous guidance which aided the success of this project work.

My heartfelt gratitude goes to my parents Mr. and Mrs. Ifeanyi Duru and all other family members for their prayers, moral support and financial support throughout my stay in the University and the success of my project.

ABSTRACT

This study aimed at examining the information needs and resource utilization of teachers of selected secondary schools in Awka South L.G.A of Anambra State, seven research questions guided the study. Descriptive survey research design was adopted for the study. The population of the study comprised of 634 classroom teachers in 22 Government owned secondary schools, 50 teachers were selected from 5 schools, the main instruments used in the collection of data was questionnaires and checklist, percentage and mean were used to answer the researcher questions. The major findings of the research includes: the teachers accepted that not being aware that information about high blood pressure exist and can be a hindrance from managing their condition and utilizing meaningful information. It is advised that awareness programs should be done by health practitioners to give out enlightened information about high blood pressure. The researcher recommends that information on lifestyle change that can help to control high blood pressure should be provided to the teachers

CHAPTER ONE

INTRODUCTION

Background of study

Information is a basic human need; it is needed virtually in all angles of human endeavor such as teaching, health wise, decision making, education, and the likes. No modern society can function effectively within the intensive of information whether in print or non-print format. The word information cannot be mentioned in isolation of human beings. Information has been described as the master resource, the chief raw material and the principle product of modern economics. Information can be seen as data that have been subjected to some logical processing or functions capable of answering a user's query, be it recorded, summarized or simply collected to help in decision making,(Ogunsanwo, 2012).

According to (Mooko and Aina, 2017) Information is the axle, in which the economic, social, political and industrial development of any nation revolves, andalso the bedrock or pillar of the nation. It is like the wings with which a nation flies. Therefore, no nation can develop without making effective use of information. It is a crucial agent of change, a conveyor of knowledge, a reinforcement of ideas and opinions that is meant to change or increase understanding of something.

Information needs according to (Case and Given2016) is the recognition of one's knowledge as inadequate in order to satisfy one's goals. Information needs rises as a result of something missing and leads to one searching and locating the information that will bring about a greater understanding and meaning of what is unknown

Information needs of people living with high blood relates to the condition that will help them manage and reduce the risk of having highblood pressure. Health workers can assist patients in understanding the causes and risk factors of patients who may want to learn about the factors that contribute to hypertension and their personal risk for the condition. According to the American Heart Association, risk factors for high blood pressure include age, family history, being overweight or obese, smoking, and a sedentary lifestyle (Whelton2018).

Patients may have questions about the medications used to treat high blood pressure. Beta-blockers, angiotensin-converting enzyme (ACE) inhibitors, and diuretics are commonly used medications for hypertension (James 2014).

High blood pressureis a condition in which the force of blood flow against the walls of the arteries is high. This can occur if the amount of blood flow is large or if the walls of the arteries are narrow. Highblood pressure or hypertension is high if resistance to blood flow is highit means that blood is not able to easily be transported

throughout your body. High blood pressure usually rises and falls throughout the day, but if it stays elevated for an extended period of time, it can lead to health problems.

Hypertension is known as the “silent killer” due to lack of signs and symptoms associated with its onset; many people do not even know they have it until they experience other health issues. Thus, it is important to have blood pressure checked regularly. According to Aina (2017) high blood pressure can be influenced by a variety of factors, such as family history of high blood pressure can increase your risk of developing hypertension, as one gets older, the risk of developing high blood pressure increases, unhealthy lifestyle habits, being overweight or obese puts extra pressure on the heart and can lead to high blood pressure, chronic stress can raise blood pressure levels over time.

According to (Ogah, 2014) managing high blood pressure involves a combination of lifestyle changes and medications such as avoid foods high in saturated and added sugars, aim for at least 150 minutes of moderate-intensity aerobic exercise or 75 minutes of vigorous aerobic exercise per week, losing even a small amount of weight can help lower blood pressure. A healthy body mass index (BMI) is between 18.5 and 24.9, men should limit alcohol to two drinks per day, and women should limit alcohol to one drink per day, and the likes. On high blood pressure as a health

challenge, inability to access quality and timely health information by people living with high blood pressure will lead to loss of trust and confidence.

According to (Scott 2021) situations of isolated systolic high blood pressure is common, the diastolic blood pressure does not need to be high for you to have high blood pressure. The systolic blood pressure usually increases with age (unlike the diastolic pressure, which usually decreases after a certain age). High systolic blood pressure can lead to stroke, heart attack, congestive heart failure, kidney damage, blindness, or other conditions. Though it cannot be cured, it can be treated. It is also correlated with greater risk for heart attacks, strokes, and kidney failure. So it is advised by healthcare practitioners that high blood pressure patients are to properly utilize the information provided to them in order to manage their health condition.

Resource utilization of people living with high blood pressure has put a lot of healthcare practitioners to have several studies conducted on the resources that should be provided to their patients, investigating the cost of managing high blood pressure in Nigeria, has made it known that individuals with hypertension incurred high costs due to the need for regular medication, diagnostic tests, and hospital visit, Ogah (2014). Also low-income individuals are more likely to experience financial hardship as a result of hypertension management.

Also the attitude which they display toward the resources provided to them, the seeking behaviors of the patients information needs can affect the positive outcome of their resource utilization, (Akintunde, 2018).

According to(Akinlua, 2015) effective utilization of resources can be helpful for both the users and researcher, not only does it ensure theresearchers have enough work to make their role visible and profitable, it also prevent overworking, weakness and provide a more balanced way for users to manage the condition. Living with high blood pressure comes with challenges that can significantly impact a person's quality of life and overall well-being. These challenges encompass various aspects of daily life, including physical health, emotional well-being, social interactions, and healthcare management. High blood pressure increases risk of cardiovascular and the major risk factor for cardiovascular diseases are heart attacks, strokes, and heart failure.

According (Whelton, 2018)People with hypertension face the constant challenges of managing their high blood pressure levels to reduce the risk of these life-threatening complications. High blood pressure often involves taking medication on a regular basis, however, adhering to medication regimens can be challenging for many individuals due to forgetfulness, side effects, cost, or a lack of understanding about the importance of consistent medication use.

It is worth noting that the specific challenges faced by individuals living with high blood pressure can vary depending on factors such as age, co morbidities, socioeconomic status, and access to healthcare resources. Regrettably lack of professional medical advice and guidance, poor utilization of the necessary information needsresources that is essential to address these challenges effectively seen to be lacking.

Lack of awareness of high blood pressure seems to be the major hindrance to its management. They are in need of appropriate and adequately packaged high blood pressure information which includes risk factors, its early warning sign that could guide these efforts may prove abortive if their information needs in this respect are not identified and adequately met.

Statement of the Problem

The prevalence of high blood pressure, has been under estimated many people living with high blood pressure, have limited knowledge about the condition, its causes, risk factors and treatment options. This can lead to misconception about the condition and its management.

People living with high blood pressure, may have difficulty accessing reliable sources of information and support. This may be due to limited access to healthcare resources, language barriers or lack of awareness about available resources. As a

result, individuals may not receive the necessary support and guidance to effectively manage their condition. The limited availability of resources specifically tailored to the needs of people living with high blood pressure may be a barrier to effective management. This could include access to medication, dietary resources and physical activity programs that can aid in the control of blood pressure.

Preliminary observation from the researchers shows that efforts have been made in the prevalent of high blood pressure but none have effectively dealt on information needs and resource utilization by people living with high blood pressure hence, the need for the study.

Purpose of the Study

1. This study sought to find out the information needs of teachers living with high blood pressure in selected secondary school in Awka South L.G.A of Anambra State.
2. To determine the resource utilization of teachers living with high blood pressure in selected secondary school in Awka South L.G.A in Anambra State.
3. To ascertain the existing awareness on high blood pressure of selected schools teachers in Awka South L.G.A of Anambra State.
4. To find out the media through which teacher living with high blood pressure access information.

5. To determine the preferred media for effective information access on high blood pressure by teachers in Awka South L.G.A in Anambra State.
6. To find out the hindering factors effecting information needs and resource utilization of teachers living with high blood pressure in Awka South L.G.A of Anambra State.
7. To determine the strategies for effective means of information utilization among teachers living with high blood pressure in Awka South L.G.A of Anambra State.

Significance of the Study

This study is significant not just to teachers living with high blood pressure but also to health professionals at all levels, the researchers, government and non-governmental organizations and information professionals at all levels.

To health professionals at all levels this research will improve communication between them and the patients, to help them understand the needs and concerns of people living with high blood pressure, it can lead to improved communication between patients and providers, which can help to improve adherence to treatment and health outcomes. This will help them to identify more effective interventions for managing high blood pressure which include new medications, lifestyle changes,

and self-management strategies. This study will enable them identify ways to reduce the cost of managing high blood pressure.

To researchers the study of information needs and resource utilization of people living with high blood pressure will help them identify gaps in the knowledge about how people living with high blood pressure access and use information and resources. It will help to develop new interventions to improve the way that people living with high blood pressure access and use information and resources which include educational programs, support groups, or self-management tools. This research will help researchers to improve the quality of care for people living with high blood pressure, by developing new guidelines for providers, training providers on how to better communicate with patients, or developing new ways to measure the effectiveness of care. This study will help researchers to develop new ways to prevent high blood pressure, improve the management of high blood pressure, or reduce the risk of complications from high blood pressure.

To government and non-governmental organizations (NGOs) it will help them to better understand the needs of people living with high blood pressure, which can inform the development of policies and programs to improve their health outcomes. It will also help them raise awareness of high blood pressure and to advocate for policies and programs that support people living with the condition. The research done about this study over the years has helped a lot, by helping people to better

manage their high blood pressure, governments and non- governmental organization has reduces the cost of healthcare. For example, research has shown that people who are able to control their blood pressure are less likely to experience heart attacks, strokes, and other serious health problems. These complications can be expensive to treat, so by helping people to control their blood pressure, governments and non-governmental organization can save money on healthcare costs. The benefits of research on information needs and resource utilization of people living with high blood pressure are clear. By better understanding the needs of this population, governments and NGOs can develop more effective programs and interventions to improve health outcomes, reduce costs, and improve quality of life.

To teachers living with high blood pressure this research, will help them understand high blood pressure, steps to manage their condition and prevent complications. Improve their access to information, enable them identify and develop new resources for people with high blood pressure, such as educational materials, support groups, and online tools. This can help people to learn more about their condition and get the support they need to manage it effectively. It can help people to develop skills for self-managing their high blood pressure, help to raise awareness of the importance of preventing high blood pressure.

To Information professionals at all levels this work enable them understand the information needs of people with high blood pressure, how they can develop

more effective communication and education strategies, to make people better understand their condition and how to manage it to improve health outcomes. Information professionals can also use research on information needs to enhance patient engagement, by providing people with the information they need in a format that is easy to understand, it can also help information professionals improve resource allocation by understanding how people with high blood pressure are using resources identifying areas where resources are being under-utilized and make recommendations for how to improve resource allocation.

Better management of high blood pressure can lead to cost savings for both individuals and healthcare systems. By addressing the information needs of individuals with high blood pressure. Studying the information needs and resource utilization of people living with high blood pressure can lead to improved health outcomes, cost savings, equity, and patient empowerment to people living with high blood pressure.

Scope of the Study

This research is sought to find out information needs and resource utilization of teachers living with high blood pressure in Awka South L.G.A in Anambra State. This research work is limited to Unizik High School teachers, fishers of men

secondary school Awka, Differential College Awka, St Lucy group of school, Capital city group of school.

This study's aim is to identify the information needs of teachers living with high blood pressure, examining their current awareness about the condition, how to utilize the resources, identifying any gaps in the current information resources available to people living with high blood pressure.

The study will identify the barriers that teachers with high blood pressure face in accessing the available resources to manage their condition. This will involve examining the factors that affect resource utilization and identifying ways to improve utilization

Research Questions

1. What is the level of awareness of high blood pressure in Awka South Local Government Anambra State?

2. What are the information needs of teachers living with high blood pressure in Awka South Local Government Anambra State?
3. What is the extent of resource utilization of teachers living with high blood pressure in Awka South Local Government Anambra State?
4. What are the various media through which teachers living with high blood pressure access information?
5. What are the preferred media for effective information access on high blood pressure of teachers in Awka South Anambra state?
6. What are the factor hindering information needs and resource utilization of teachers living with high blood pressure in Awka South Anambra State?
7. What are the strategies for effective means of information utilization among teachers with high blood pressure in Awka South Anambra State?

CHAPTER TWO

REVIEW OF RELATED LITERATURE

This chapter presents a review of related literatures on information needs and resource utilization of teachers living with high blood pressure in Awka South L.G.A Anambra State. It will be reviewed under the following sub- heading;

Concept of high blood pressure

Information needs

Resource utilization

Information needs and resource utilization of teachers living with high blood pressure

Challenges affecting resource utilization of teachers living with high blood pressure

Strategies for satisfying information needs of teachers living with blood pressure

Summary of Review of Literature

Concept of High Blood Pressure

According to Adebuseye(2016), high blood pressure is also known as hypertension which is a condition in which the force of blood against the walls of the arteries is consistently elevated, leading to potential damage to the blood vessels and various organs in the body. It is a chronic medical condition that affects a significant proportion of the global population. Blood pressure is measured in millimeters of mercury (mmHg) and is recorded as two numbers. The first number, or systolic pressure, measures the pressure in the arteries when the heart beats. The second number, or diastolic pressure, measures the pressure in the arteries when the heart is at rest between beats. A blood pressure reading of 120/80 mmHg or lower is considered normal, while a reading of 140/90 mmHg or higher is considered high.

According to Anderson (2017) it is a serious condition that can increase the risk of heart disease, stroke, kidney disease, and other health problems if left untreated. It is often referred to as the “silent killer” because it often has no symptoms until it causes significant damage. However, some people may experience symptoms such as: headaches dizziness Blurred vision shortness of breath chest pain nosebleeds.

According to Alakija (2014) high blood pressure is a condition in which the force of blood pushing against the walls of the arteries is too high. This can damage

the arteries and increase the risk of heart attack, stroke, and other health problems. He defines high blood pressure as a systolic blood pressure of 140 mmHg or higher, or a diastolic blood pressure of 90 mmHg or higher. Systolic blood pressure is the pressure in the arteries when the heart beats. Diastolic blood pressure is the pressure in the arteries when the heart is at rest. He states that high blood pressure is a silent killer, meaning that it often has no symptoms. This is why it is important to have your blood pressure checked regularly, even if you feel healthy. People living with high blood pressure require adequate information need and resources to manage the condition effectively.

Concept of Information Needs

According to Smith (2019), Information needs refer to the specific information required by an individual to fulfill a particular purpose or objective. It may vary depending on the context, the nature of the problem, and the intended outcome. Meeting information needs often involves identifying relevant sources of information, analyzing and synthesizing information, and communicating the findings effectively to the intended audience. To identify information needs, it is important to clearly define the problem or objective that needs to be addressed, identify the key questions that need to be answered to address the problem or objective, determine what information is needed to answer the key questions, consider the sources of information that are available and assess their reliability and

relevance to the problem or objective, identify any gaps in the available information and determine what additional information is needed to fill those gaps. According to Savolainen (2015) Information needs are the recognition of the discrepancy between an individual's current knowledge state and the knowledge state considered necessary for accomplishing a task or achieving a goal.

Information needs are “an individual's or a group's desire to obtain information to satisfy conscious or unconscious goals or perceived deficiencies. It refer to “an individual's or a group's perception of a gap between what is known and what is desired to be known.” It also the recognition of the gap between what is known and what needs to be known. Information needs represent “the specific information required by an individual to fulfill a goal or a task Case, (2012).

According to Marchionini (2018) also define Information needs as a reflection of the cognitive harshness experienced by an individual when faced with a problem or question and a desire to reduce that dissonance through acquiring relevant information. It is said that it can be influenced by conscious or unconscious goals, tasks, problems, or the desire to reduce cognitive dissonance.

Concept of Resource Utilization

According to Meredith (2012) Resource utilization is the process of determining how resources (such as people, equipment, materials, and facilities) are being used within an organization, and ensuring that they are deployed in the most efficient and productive manner to achieve the desired goals and objectives. It is known as the formula for success, which refers to the effective and efficient deployment and allocation of resources within an organization or system to achieve optimal productivity and output. It is seen as the process of strategically measuring how effective resources are used and this process is a key to achieving research success. It is often undervalued, creating a robust framework for assessing the conditions of existing resources might seem complicated, but with the right tools it can be easy. It is the measure of how much available resources are currently in use. It can help to plan how to utilize resources more effectively to ensure that organization is being as productive as possible.

According to Drucker (2014) Resource utilization is the ability to make the best use of all available resources to accomplish organizational goals. It involves deploying resources in a way that maximizes their productivity and minimizes waste, ensuring that each resource is utilized optimally and contributes to the overall performance of the organization.

According to Austin (2013) Resource utilization is the process of managing and allocating resources in a way that maximizes their value and minimizes their

waste. It involves monitoring and controlling the flow and distribution of resources, identifying bottlenecks or underutilized resources, and making adjustments to optimize resource allocation and usage. It highlights the theme of efficiency, effectiveness, productivity, and optimization in managing and making use of resources to achieve desired outcomes.

Information Needs and Resource Utilization of People Living With High Blood Pressure

The information needs and resource utilization quality of patients with hypertension, examines the type of information patients desired and their preferred sources of information, and the methods to which high blood pressure patients identify ways to improve their health experiences, and support individuals living with hypertension, Yang (2016). Information needs of patients are to be investigated to know the information-seeking behaviors among individuals with hypertension, Erdmann (2019).

According to Aniogbolu, (2014) information needs of people living with high blood pressure are categorized into four main areas, health information which includes information about the causes, symptoms, diagnosis, and treatment of high blood pressure. Lifestyle information- which include information about how to make

lifestyle changes to manage high blood pressure, such as eating a healthy diet, exercising regularly, and quitting smoking. Emotional support this include information about how to cope with the emotional challenges of living with high blood pressure, such as stress, anxiety, and depression, they also need financial assistance it involve information about how to get financial assistance to pay for medications, medical care, and other expenses related to high blood pressure

In managing this condition the use of eHealth platform should be applied to patients suffering from hypertension and with the assistance of health professionals in public health system, they should see to the proper utilization of such platform and also should be considered by the government to provide them with this information needs. These needs are critical for effective management of hypertension and prevention of complications(Alsharif, 2023).

Challenges Affecting Resource Utilization of People Living with High Blood Pressure

According to Smith A.B. (2012) people living with high blood pressure face several challenges that can affect their resource utilization. High blood pressure often requires long-term medication management. It cost of medications, especially if they are not covered by insurance, it can be a significant financial burden for individuals with limited resources. This can lead to non-adherence or reduced

dosage, compromising the effectiveness of treatment. Regular doctor visits, laboratory tests, and monitoring equipment (such as blood pressure monitors) can result in substantial medical expenses. These expenses can strain the financial resources of individuals with high blood pressure, particularly those without adequate health insurance coverage.

According to Holbrook (2018) lifestyle changes play a crucial role in managing high blood pressure. However, implementing these changes can be challenging for individuals with limited resources. Limited access to healthcare facilities, especially in rural or underserved areas, can pose challenges for individuals with high blood pressure. This can result in delayed or inadequate medical care, affecting proper management of the condition.

Individuals with limited education or health literacy skills may face difficulties in comprehending medical instructions and effectively managing their condition. High blood pressure can be exacerbated by stress and anxiety, and individuals with limited resources may face additional stressors related to financial instability, work, and personal life. Addressing stress and mental health concerns becomes crucial for effective blood pressure management, but accessing mental health services may be challenging for those without sufficient resources.

American Heart Association (2017) says Addressing these challenges requires a comprehensive approach that includes affordable healthcare access, public health initiatives to promote healthy lifestyles, financial assistance programs, patient education, and support systems to enhance resource utilization for individuals living with high blood pressure.

Strategies for Satisfying Information Needs of People Living with Blood Pressure

According to American Heart Association,(2017) Satisfying the information needs of people living with high blood pressure involves providing them with accurate, up-to-date, and relevant information to help them understand and manage their condition effectively. Provide educational materials, brochures, or pamphlets that explain what high blood pressure is, their cause, symptoms, and potential complications, in using this form you are creating awareness and making them know that there are materials that will enlighten them about high blood pressure. These resources will offer information on the importance of regular blood pressure monitoring and the target blood pressure range. These resources will raise awareness about lifestyle modifications, such as healthy eating, physical activity, weight management, stress reduction, and smoking cessation.

Health professionals, government and non- government should provide relevance information in hospitals and ensure that information are available in various formats, such as print, online, and audio-visual, to accommodate different learning preferences. Provide resources in multiple languages to cater to diverse populations, utilize user-friendly websites, mobile apps, or interactive tools that offer personalized information and tips, Smith (2017).

Encourage individuals to consult with their healthcare providers regularly for accurate information and guidance. Facilitate access to healthcare professionals through telemedicine or remote consultation; Promote shared decision-making between patients and healthcare providers, allowing individuals to actively participate in managing their condition, establishing support groups or community forums where individuals can connect, share experiences, and learn from one another. Organize workshops or webinars featuring healthcare professionals to address common concerns and provide evidence-based advice, Laura A. (2014).

American Heart Association (2023) encourage participation in local health events or campaigns related to high blood pressure awareness; Stay up to date with the latest research and medical guidelines on high blood pressure management. Provide timely updates on new treatment options, lifestyle recommendations, or changes in guidelines through newsletters, social media, or other communication channels. It recognizes that each individual's information needs may vary, and

provide tailored advice based on their specific circumstances, medical history, and risk factors. Encourage individuals to keep a blood pressure diary to track their readings and share the information with their healthcare providers for personalized feedback. Hence, it is crucial to ensure that the information provided is evidence-based, reliable, and aligns with the latest medical knowledge. Collaborating with healthcare professionals and organizations specializing in cardiovascular health can further enhance the quality and effectiveness of the information provided.

Summary of Review of Literature

People living with high blood pressure have a high demand for information about their condition which makes them have a number of barriers to accessing information resources about high blood pressure. Healthcare providers should play a key role in providing these information resources to them; teach them how to use online resources because they are valuable source of information, print materials can be a helpful as a way to provide information to people living with high blood pressure. By addressing these we can help to ensure that people living with high blood pressure have the information they need to manage their condition effectively.

CHAPTER THREE

METHOD

This chapter specified the procedures used in conducting the study. It was treated under the following subheading: research design, Area of the study, population of the study, sampling technique, instruments for data collection, method of data collection, method of data analysis.

Research design

The research design for this study is descriptive survey design. The descriptive survey design according to Babbie (2016) is a research method that involves collecting data through surveys, questionnaires, or interviews to describe and summarize characteristic or behaviors of a population or sample. The goal of this approach is to generate descriptive statistics that can be used to identify patterns, trends, and relationships among variables. Descriptive survey design is particularly useful when researchers want to obtain information on the prevalence or distribution of specific characteristics or behavior in a population.

Area of the study

The geographical location covered by this study is school teachers in Awka South local government area in Anambra state. Awka South Local Government Area is one of the 21 local government areas in Anambra state, Nigeria. It is located in the southeastern part of the country. The people of Awka South Local Government Area

are predominantly of Igbo ethnic descent and engage in various occupations such as trading, farming, civil service, and entrepreneurship. Awka South Local Government Area is a vibrant and bustling area with a mix of urban and rural communities. It is known for its commercial activities, educational institutions, and administrative functions. The local government area is home to various markets, businesses, and government offices.

The area has a rich cultural heritage, and traditional customs and festivals are celebrated by the residents. In terms of infrastructure, Awka South has experienced significant development, with good road networks, electricity supply, healthcare facilities, and educational institutions. However, Awka South Local Government Area plays a crucial role in the socio-economic development of Anambra State, contributing to its growth and prosperity.

Population

The population in Awka South comprised of 634 classroom teachers in 22 Government owned secondary schools in Awka South Local Government of Anambra State. This study was limited to five secondary schools in Awka south L.G.A of Anambra State (Unizik High School teachers, fishers of men secondary school Awka, Differential College Awka, St Lucy group of school, Capital city group of school). The respondents are made up of ten school teachers from each

school to find their awareness of information needs and resource utilization of living with high blood pressure.

Sample and sampling technique

Random sampling technique was carried out, it was used in determining the sample size, so (5) schools were randomly selected and ten (10) school teachers /respondent from each of the five (5) school giving a total of fifty (50) respondents.

Instruments for data collection

The main instrument for collecting data for this study is a questionnaire titled “Information needs and resource utilization of teachers living with high blood pressure in Awka South Local Government Area in Anambra state Questionnaire (INARUOTLWHBP). The questionnaire is divided into seven parts

Research question 1- 7 used a 4-point rating scale of SA (Strongly Agree), A (Agree), SD (Strongly Disagree), D (Disagree) and Each research questions has 5 items, which make it a total of 35 items.

Method of data collection

Fifty copies of the questionnaire were administered to the respondents personally by the researcher. The researcher carefully explained to the respondents what was required of them in filling out the questionnaire. The questionnaires were all collected by the researcher to ensure 100% return rate.

Method of data analysis

Data was collated and analyzed using descriptive statistics particularly the mean scores and tables. However, a criterion means (a mid- point mean score) of 2.50. The average of the individual score for response is on a 4 point rating scale.

Liker type scale (SA=4, A=3, D=2, and SD=1), (VHE=4, HE=3, VLE=2, LE=1)

$$4+3+2+1 = 2.50$$

$$4$$

Decision Rule:

Any mean score range from 2.5 and above was regarded as positive and accepted. While any score from 0-2.4 was regarded as negative and not accepted

CHAPTER FOUR

PRESENTATION AND ANALYSIS OF DATA

This chapter focuses on the presentation and analysis of data collected through questionnaire. Mean was use for the analysis and all mean score 2.5 and above was regarded to be accepted while any mean score that is less than 2.5 is regarded as not accepted.

Research Question 1: what is the level of awareness of high blood pressure for teachers in Awka South Local Government Anambra State?

Table 1: mean response for the level of awareness of high blood pressure for teacher in Awka South Local Government Anambra State.

S/N	ITEMS	SA	A	D	SD	$\bar{X}$	RESULT
1.	There are chances of developing high blood pressure at a young age.	10	9	11	20	2.2	Not accepted
2.	exercise or dietary programs, may reduce or increase high blood pressure	22	21	5	2	3.3	Accepted
3.	High consumption of alcohol can lead to the development of high blood pressure.	37	12	1	0	3.7	Accepted
4.	High blood pressure cannot be cured it can only be managed.	44	6	0	0	3.8	Accepted
5.	A person who is obese and consumes high – sodium diet may likely develop high blood pressure.	35	15	0	0	3.7	Accepted
Grand Mean						3.3	

From table 1: mean of 2.2 people rejected that there are chances of developing high blood pressure at a young age. 3.3 respondents accepted that exercise or dietary programs, may reduce or increase high blood pressure, 3.7 mean of people show that

high consumption of alcohol leads to the development of high blood 3.8mean respondent accepted that high blood pressure cannot be cured it can only be managed., 3.0 shows that E-books are accepted by patients and 3.7mean respondent accepted that a person who is obese and consumes high – sodium diet may likely develop high blood pressure.

RESEARCH QUESTION 2: What are the information needs of teachers living with high blood pressure in Awka South Local Government Area?

Table 2: mean response on the information needs of teachers living with high blood pressure.

S/N	ITEMS	SA	A	D	SD	$\bar{X}$	RESULT
6.	Asking your healthcare provider or pharmacist about apps for monitoring and tracking your blood pressure.	30	20	0	0	3.6	Accepted
7.	To get support from loved ones and others in your community.	25	15	6	4	3.2	Accepted
8.	To have regular medical checkups and tests, as advised by your provider	31	8	8	3	3.3	Accepted
9.	Healthcare provider may want you to check your blood pressure at home or at other locations that have blood pressure equipment.	28	12	4	6	3.2	Accepted
10.	Blood Pressure Wallet Card can be printed out and used to keep a written log of all your results.	40	10	0	0	3.8	Accepted
Grand Mean		3.4					

All are accepted mean of 2.5 and above, hence they are all acceptable.

From table 2: A mean average of 3.6 believe that askinghealthcare provider or pharmacist about apps for monitoring and tracking your blood pressure is the the of

information needs they need, mean 3.2 shows that the teachers believe getting support from loved ones and others in your community is an information need that they believe can help manage their condition, mean 3.3 shows that to have regular medical checkups and tests, as advised by health providers 3.2 shows that the teachers accept that healthcare provider may want to check your blood pressure at home or at other locations that have blood pressure equipment, 3.8 shows that blood pressure Wallet Card can be printed out and used to keep a written log of all your results.

Research Question 3: What is the extent of resource utilization of people living with high blood pressure in Awka South Local Government Anambra State?

Table 3: mean responses to the extent of resource utilization of people living with high blood pressure in Awka South Local Government Anambra State.

S/N	ITEMS	VHE	HE	VLE	LE	$\bar{X}$	RESULT
6.	Medications (prescription or over-the counter)	23	15	2	10	3.0	Accepted
7.	Regular doctor visit or checkups.	37	13	0	0	3.7	Accepted
8.	Laboratory test or diagnostic procedures.	40	10	0	0	3.8	Accepted
9.	Life style modifications (e.g diets, exercise, stress management).	47	3	0	0	3.9	Accepted
10.	Health education materials or online resources.	45	5	0	0	3.8	Accepted
Grand Mean						3.6	

From table 3: A mean average of 3.0 respondents shows that people do regularly take prescribed medications for high blood pressure, 3.7 shows that the respondents

do visit the doctor for regular checkups 3.8 showed that respondents usually go to the laboratory for tests once they dictate any health abnormal symptoms by doing this information needs will be utilized. It can help prevent risk of high blood pressure, 3.9 shows that the respondents often utilize techniques to manage stress to promote relaxation because it can help lower blood pressure, 3.8 mean respondents' accepted that health education materials or online resources will help manage high blood pressure.

Research Question 4: What are the various media through which people living with high blood pressure access information?

Table 4: mean response for the various Medias of accessing information

S/N	ITEMS	SA	A	D	SD	$\bar{X}$	RESULT
16.	Television	38	12	0	0	3.7	Accepted
17.	newspapers	42	8	0	0	3.8	Accepted
18.	magazines	29	10	9	2	3.3	Accepted
19.	Health related websites	11	7	2	30	2.0	Not accepted
20.	Social media platforms	13	5	10	22	2.2	Not accepted
Grand Mean						3	

From table 4: mean of 3.7 respondents shows that television is one of the media accepted by high blood pressure patients, 3.8 shows that newspapers are used to access information, 3.3 shows that magazines are accepted for accessing information, 2.0 mean of respondent shows that health related websites are not

accepted by most people and 2.2 shows that social media platforms are not accepted due to high level of literacy among the elderly.

Research Question 5: What are the preferred media for effective information access on high blood pressure?

Table 5: mean response for the preferred media for effective information access on high blood pressure

S/N	ITEMS	preferred	Not preferred	RESULT
21.	I prefer Printed brochures/pamphlets	70%	30%	Accepted
22.	watch educational videos	60%	40%	Accepted
23.	Social me platforms might be the help	60%	40%	Accepted
24.	I barely go Online to access articles/websites	40%	60%	Not accepted
25.	I prefer face-to-face counseling or support `groups meeting.	80%	20%	Accepted

From table 5: mean of 70% respondents accepted that printed brochures and pamphlets are accepted by them to seek information that will help them manage high blood pressure, 60% respondents accepted that educational videos as one of the effective means of accessing information needs of people living with high blood pressure, 60% mean shows that social media platforms are accepted by the

respondents as a preferred means of accessing information needs, 40% show that online articles/websites was not accepted by the respondents and 80% respondent accept that engaging in face to face counseling and support groups meeting are accepted as one of the preferred means of accessing information that will help manage high blood pressure condition.

Research Question 6: What are the factor hindering information needs and resource utilization of teachers living with high blood pressure?

Table 6: mean response for the factor hindering information needs and resource utilization of teachers living with high blood pressure.

S/N	ITEMS	SA	A	D	SD	$\bar{X}$	RESULT
26.	I have never attended any seminar on high blood pressure.	25	5	9	11	2.8	Accepted
27.	I do not listen to radio.	11	6	8	25	2.1	Not accepted
28.	Not being aware that such information exists.	28	10	6	5	3.2	Accepted
29.	I have never visited the library to access materials on high blood pressure.	21	7	1	19	2.5	Accepted
30.	I cannot access the internet on issues relating to high blood pressure.	29	11	3	7	3.2	Accepted
Grand Mean						2.8	

From table 6: mean 2.8 respondents accepted that they have never attended any seminar on high blood pressure, 2.1 mean respondents shows that they do not accept that they do not listen to radio, mean 3.2 shows that they accept that they have not been aware that such information exists. 2.5 mean of respondent accepted that most

of them have never visited the library before to access such type of information, mean 3.2 showed that they cannot access the internet on issues relating to high blood pressure.

Research Question 7: What are the strategies for effective means of information utilization among high blood pressure patients?

Table 7: mean response of the strategies for effective means of information utilization among high blood pressure patients.

S/N	ITEMS	SA	A	D	SD	$\bar{X}$	RESULT
31.	Current gathering and sharing of relevant information can help manage the problem	20	17	7	6	3.0	Accepted
32.	Try to stay up to date with latest health development	35	15	0	0	3.7	Accepted
33.	Health care provider should take their job serious.	40	10	0	0	3.8	Accepted
34.	Communicating and sharing information to other suffering from the condition.	42	8	0	0	3.8	Accepted
35.	Organizing workshops, seminars, educational events related to high blood pressure can help in the utilization of resources	37	11	2	0	3.7	Accepted
Grand Mean						3.6	

From table 7: mean 3.0 shows that the respondents believe that current gathering and sharing of relevant information can help manage the problem, 3.7 mean of respondents accept that staying up to date with latest health development can be an effective mean of utilizing resources, mean 3.8 show that printed newspaper and

magazine are accepted as a preferred media for accessing information, 3.8 mean respondents accepted that communicating and sharing information to other suffering from the condition will help in utilizing the information resources provided to them, 3.7 mean respondent accepted that organizing workshops, seminars, educational events related to high blood pressures can help in the utilization of resources.

CHAPTER FIVE

DISCUSSION, RECOMMENDATION AND CONCLUSION

This chapter deals with the discussion of the findings, recommendation and conclusion.

Discussion of the Finding

The following are the alternate of the analysis made based on questionnaire tables drawn.

In the information needs of teacher living with high blood pressure in Awka South Local Government Anambra State, Table1 reveal that : people rejected that there are chances of developing high blood pressure at a young age, respondents accepted that exercise or dietary programs, may reduce or increase high blood pressure, people shows that high consumption of alcohol leads to the development of high blood , respondents accepted that high blood pressure cannot be cured it can only be managed., 3.0 shows that E-books are accepted by patients and 3.7mean respondent accepted that a person who is obese and consumes high – sodium diet may likely develop high blood pressure.

In the extent of resource utilization of people living with high blood pressure in Awka South Local Government Anambra State, table 2 revealed that the respondents accepted that people do take their regular prescribed medications for high blood pressure to manage to their condition, this section shows that people

monitor their blood pressure by visiting healthcare provider on how to manage their condition, the respondent believe that their access to healthy food option that support a low – sodium diet, that avoiding food containing less salt and seasoning can help prevent risk of high blood pressure, respondent accept that techniques like exercise, workout and yoga can help manage stress and promote relaxation can help lower blood pressure, the respondents accepted that reading materials that are based on health issues will help manage and prevent high blood pressure.

In the most effective resources for managing high blood pressure, Table 3 reveal that the teachers rejected that there are chances of developing high blood pressure at a young age because they believe that high blood pressure is a condition that only the old faces, the respondents accepted that exercise or dietary programs, may reduce high blood pressure, they are aware that believe that exercise can help manage the condition and some dietary program may reduce the patients chances of increase in blood pressure, in doing this it will help them manage their condition, the teachers also are also aware that high consumption of alcohol leads to the development of high blood, the respondents accepted that they are aware that high blood pressure cannot be cured it can only be managed., they that they believe that a person who is obese and consumes high – sodium diet may likely develop high blood pressure.

In the various Medias of accessing information by high blood pressure, Table 4 reveal that most respondents accepted that television is one of the media accepted by teachers living with high blood pressure they believe that by watching programs that are all about health matter will help manage and prevent their high blood pressure condition , the respondents accepted that newspapers and be used to access information, the newspaper is the quickest information resource that people access frequently, magazines are were accepted for accessing information by the respondents, they did not accept that health related websites because, most of people suffering from this condition are not literate enough to know that such information exist, while some have been so reluctant about it information provided on the internet. Social media platforms were not accepted due to high level of literacy among the elderly and their lack of time to do social media.

The preferred media for effective information access on high blood pressure, table 5 revealed that respondents accepted that printed brochures and pamphlets are accepted by them this is because people prefer hardcopy resource because they can easily access it at their own convenient, respondents accepted that educational videos as one of the effective means of accessing information needs of people living with high blood pressure, this videos can be inform of advertisement and enlightenment on awareness, that will help in the prevention and how they can manage their condition, the respondents reveal that social media platforms are accepted by the

respondents as a preferred means of accessing information needs they feel this is prefer be it a fast means to sharing resources to people and the only way people can abide to this media is for them to be educated and convinced online articles/websites was is not accepted by the respondents, they believe not all healthcare centers provide such resources to their patients and respondents accepted that engaging in face to face counseling and support groups meeting is accepted as one of the preferred means of accessing information that will help manage high blood pressure condition, they believe that organizing support groups among patients suffering from same condition will help them know more about high blood pressure more and give them room to share tips on how it can be managed.

The factor hindering information needs and resource utilization of people living with high blood pressure, Table 6 revealed that the respondents accepted that they have never attended any seminar on high blood pressure, most of them are not aware the such seminar programs, respondents accepted that they do not listen to radio by doing this most of them tend to miss vital information when shared on radio programs, the teachers accepted that not being aware that such information exists can be a hindrance from managing their condition, and utilizing their information needs, the teachers accepted that most of them have never visited the library. The respondents accepted that some of them don't have access on issues relating to high blood pressure on the internet, doing this printed material will be of great utilization.

The respondents accepted that communicating and sharing information to other suffering from the condition will help in utilizing the resources provided to them, they also accepted that organizing workshops, seminars, educational events related to high blood pressure can be a great strategy that will help in the utilization of resources, it will also promote the use of resources and help high blood pressure patients utilize resources effectively to enable them manage their condition.

RECOMMENDATION

People living with high blood pressure (HBP) have a variety of information needs it is advised that awareness programs should be done by health practitioners to give out enlightenment information about high blood pressure, Information on lifestyle changes that can help to control the condition, Information about medication options, Information about managing high blood pressure during pregnancy, Information about coping with the emotional and social impact of the condition.

It is important for people living with high blood pressure to find reliable sources of information about their condition. They should also talk to their healthcare provider about their specific needs. By working together, healthcare providers and patients can develop a plan to manage high blood pressure and improve their health.

Healthcare providers, like doctors and nurses, can provide information that can help people develop a plan to manage the condition. Non-profit organizations should provide information and support to people living with high blood pressure by organizing workshops and seminar on matters relating to health matters. There are a number of websites that provide information about high blood pressure, these websites should be communicated to the patients because it can be a good source of information resources that can be provided to them, but it is important to be aware that not all websites are created equal. Some websites may provide inaccurate or misleading information.

It is advised and recommended that patient suffering from this condition should go for regular check-ups, because it is important to see the doctor regularly to monitor the blood pressure and make sure that the treatment plan is working. It is important for them to take their medication as prescribed by the doctor.

CONCLUSION

In conclusion, the information needs and resource utilisation of people living with high blood pressure is complex and varies. People with high blood pressure often

have a need for information about the condition itself, as well as about the medications they are taking, lifestyle changes they can make, and the risks and complications of the condition. They may also need information about how to access and use healthcare resources, such as doctors, nurses, and community health programs.

It is important to note that not all people with hypertension have the same information needs. Some people may need a lot of information, while others may only need a little. The best way to meet the information needs of people with high blood pressure is to provide them with a variety of resources and to be flexible in meeting their needs. Healthcare providers, online resources, and print resources can all be used to meet the information needs of people with high blood pressure.

Lastly, it is important to remember that the information needs of people with hypertension may change over time, so it is important to be flexible in meeting their needs.

APPENDIX I

INTRODUCTORY LETTER

Department of Library and
Information Science,
Faculty of Education,
NnamdiAzikikwe University,
AwkaAnambraState.
1thJune 2023

Dear Respondent,

Request for your kind cooperation and assistance in the collection of data research work

I am a final year student in the above mentioned department, and I am carrying out a research on the topic; “information needs and resource utilization of teacherliving with high blood pressure: A study on AwkaSouth Local Government Area Anambra State.

This research is done in partial fulfillment of the requirements for the award of Bachelor in library and information Science (B. LIS) Degree. Please, kindly assist me in completing the attached set of questions, which is being used to gather data for the research. All the information received from you will be treated with a high sense of confidentiality. It will be strictly used for academic purposes only (for this research in particular).

Thanks in anticipation for your full cooperation.

Yours faithfully,

ChideraDuru

APPENDIX II

INFORMATION NEEDS AND RESOURCE UTILIZATION OF TEACHERS LIVING WITH HIGH BLOOD PRESSURE IN AWKA SOUTH LOCAL GOVERNMENT AREA IN ANAMBRA STATE QUESTIONNAIRE (INARUOTLWHBP).

Instruction: please read carefully and tick good (✓) against each opinion based on your level agreement or disagreement: SA (Strongly Agree), A (Agree), D (Disagree), SD (Strongly Disagree),

Section A: What are the information needs of teachers living with high blood pressure?

Please from the statement listed below, tick based on your level of agreement or disagreement; indicate the information needs of teachers living with high blood pressure.

S/N	ITEMS	SA	A	D	SD
1.	Asking your healthcare provider or pharmacist about apps for monitoring and tracking your blood pressure.				
2.	To get support from loved ones and others in your community.				
3.	To have regular medical checkups and tests, as advised by your provider				
4.	Healthcare provider may want you to check your blood pressure at home or at other locations that have blood pressure equipment.				
5.	<u>Blood Pressure Wallet Card</u> can be printed out and used to keep a written log of all your results. be printed out and used to keep a written log of all your results.				

Instruction: please read carefully and tick good (✓) against each opinion based on your level agreement or disagreement: VHE (very high extent), HE (high extent), VLE (very low extent), LE (low extent).

Section B: The extent of resource utilization of people living with high blood pressure

Please from the statement listed below, tick based on your extent to which you utilize the following resources to manage your high blood pressure.

S/N	ITEMS	VHE	HE	VLE	LE
6.	Medications (prescription or over-the counter)				
7.	Regular doctor visit or checkups.				
8.	Laboratory test or diagnostic procedures.				
9.	Life style modifications (e.g diets, exercise, stress management).				
10.	Health education materials or online resources.				

Section C: the level of awareness of high blood pressure

Instruction: please read carefully and tick good (✓) against each opinion based on your level agreement or disagreement: SA (Strongly Agree), A (Agree), D (Disagree), SD (Strongly Disagree).

Please from the statement listed below, tick based on your level of agreement or disagreement; to indicate the level of awareness of high blood pressure.

S/N	ITEMS	SA	A	D	SD
11.	There are chances of developing high blood pressure at a young age.				
12.	exercise or dietary programs, may reduce or increase high blood pressure				
13.	High consumption of alcohol leads to the development of high blood pressure.				
14.	High blood pressure cannot be cured it can only be managed.				
15.	A person who is obese and consumes high – sodium diet may likely develop high blood pressure.				

Section D: the various media which people living with high blood pressure access information.

Instruction: please read carefully and tick good (✓) against each opinion based on your level agreement or disagreement: preferred (P) and not preferred (NP)

Please from the statement listed below, tick based on your level of agreement or disagreement; to indicate the various media which people living with high blood pressure access information.

S/N	ITEMS	SA	A	D	SD
16.	Television				
17.	newspapers				
18.	magazines				
19.	Health related websites				
20.	Social media platforms				

Section E: preferred media for effective information access on high blood pressure

Instruction: please read carefully and tick good (✓) against each opinion based on your level agreement or disagreement: SA (Strongly Agree), A (Agree), D (Disagree), SD (Strongly Disagree).

Please from the statement listed below, tick based on your level of agreement or disagreement; to indicate the preferred media for effective information access on high blood pressure.

S/N	ITEMS	SA	A	D	SD
21.	Printed brochures/pamphlets				
22.	Educational videos				
23.	Social media platforms				
24.	Online articles/websites				
25.	Face-to-face counseling or support `groups				

Section F: factor hindering information needs and resource utilization of people living with high blood pressure.

Instruction: please read carefully and tick good (✓) against each opinion based on your level agreement or disagreement: SA (Strongly Agree), A (Agree), D (Disagree), SD (Strongly Disagree).

Please from the statement listed below, tick based on your level of agreement or disagreement; to indicate the factor hindering information needs and resource utilization of people living with high blood pressure.

S/N	ITEMS	SA	A	D	SD
26.	I have never attended any seminar on high blood pressure.				
27.	I do not listen to radio.				
28.	Not being aware that such information exists.				
29.	I have never visited the library to access materials on high blood pressure.				
30.	I cannot access the internet on issues relating to high blood pressure.				

Section G: strategies for effective means of information utilization among high blood pressure patients

Instruction: please read carefully and tick good (✓) against each opinion based on your level agreement or disagreement: SA (Strongly Agree), A (Agree), D (Disagree), SD (Strongly Disagree).

Please from the statement listed below, tick based on your level of agreement or disagreement; to indicate the strategies for effective means of information utilization among high blood pressure patients.

S/N	ITEMS	SA	A	D	SD
31.	Current gathering and sharing of relevant information can help manage the problem				
32.	Stay up to date with latest health development				
33.	Health care provider should take their job serious.				
34.	Communicating and sharing information to other suffering from the condition.				
35.	Organizing workshops, seminars, educational events related to high blood pressure can help in the utilization of information resources.				

APPENDIX III

This research was done in Unizik High School teachers, fishers of men secondary school Awka, Differential College Awka, St Lucy group of school, Capital city group of school. Accepted (A) indicates the schools agreed to the terms in the table while (NA) not accepted indicates the schools that the not agree to the items in the table.

RESEARCH QUESTION 1: What are the information needs of teachers living with high blood pressure in Awka South Local Government Area?

TABLE 1
